Experience

- UKG** Jul 2025 - Present
 - Software Engineer*
 - Eliminated critical performance bottlenecks across deployment-monitoring dashboards through DB-level optimizations (iTVFs, indexes, stored procedures) and Angular rendering improvements (OnPush change detection, trackBy, pure pipes), reducing API response times by up to **93%** and bulk processing time from **380s to 4s**.
 - Established test coverage from zero for ~50 legacy .NET controllers using AI-assisted generation, achieving **70%+** coverage across unit and integration tests.
 - Built an AI-powered merge tool that resolves ~1,000 conflicts per sprint, saving **15 engineering hours** per cycle.
 - Packaged and delivered 10+ customized releases for **3,000+ clients**, managing per-client configuration layered on top of the base product.
 - Extended the release pipeline to include presales builds, eliminating manual packaging and consolidating all product variants into a single automated process.
 - Built a database cloning utility to replicate production data (6GB) to dev environments in ~40s, used automatically via weekly cron job and on-demand by the team.
- Cred** Sep 2024 - Apr 2025
 - Automation Engineer Intern*
 - Built internal test case management services in Java, consolidating org-wide TestRail usage from **25+ accounts to 1**, reducing licensing costs by over 90%.
 - Expanded E2E test coverage for the Lending-as-a-Service module by **200% (15 to 45)** multi-step scenarios) across REST APIs and iOS using TestNG, Java, and Appium.
- Infinity Learn** Oct 2023 - Dec 2023
 - Software Engineer Intern*
 - Set up staging CI/CD pipelines on AWS Amplify, reducing deployment time by 30%.
 - Improved Lighthouse Performance score from **~40 to 80+** through frontend optimizations including faster time-to-first-paint, reduced layout shifts, and SEO and accessibility fixes.
- GreyFeathers** Dec 2022 - Oct 2023
 - Software Engineer Intern*
 - Built and shipped frontend features across 2 products — a QR-based restaurant POS system and an AI research tool (PDF upload, QnA, note-taking) — using React, Redux, and Tailwind CSS.
 - Implemented 200+ Figma designs as production React components, maintaining design fidelity across both products.

Projects

- Ayurmitram** | <https://github.com/ayurmitram> Dec 2023
 - Express.js, React.js, Random Forest Classification*
 - Built an Ayurvedic phenotype classifier combining an LLM-driven conversational intake (20 questions, one at a time) with a Random Forest model to predict prakruti across 7 categories — won 1st place at Smart India Hackathon 2023.
 - Secured user data with encryption and TTL-based auto-deletion (7 days) in MongoDB.

Achievements

- Won **1st place at Smart India Hackathon 2023** among thousands of national teams for an Ayurvedic phenotype classifier.
- Ranked 2nd at HackSquad 2022 out of 200+ teams by leading the most open-source PR merges during Hacktoberfest.
- Rated Knight (1906) on Leetcode (top 4.44%) and 3-star (1774) on Codechef; consistently ranked top 200 globally in Codechef Starters (best: 99th).
- Organized 3 open-source workshops through the GNU/Linux Users Club, reaching 500+ students on campus.

Education

- Indian Institute of Information Technology** Bhopal, India
 - Bachelor of Technology - Information Technology; GPA: 8.55/10* Dec 2021 - May 2025

Skills

- **Languages:** Java, C#, TypeScript, JavaScript, Python, SQL, Bash, C++
- **Frameworks:** React.js, Angular, Express.js, Django REST Framework, Flask, Node.js
- **Databases:** PostgreSQL, MongoDB, Microsoft SQL Server, Redis
- **Tools:** Git, TeamCity, Jenkins, Docker, Kubernetes, AWS (S3, Secrets Manager), Retool, Postman, Splunk, Grafana
- **Concepts:** REST APIs, CI/CD, JWT, Microservices, Unit & Integration Testing, GitHub Actions
